WALLACE SHIFT

CLIENT QUICK GUIDE

Domain & hosting, *without the fog.*

Most clients have a domain name account and a hosting account. They may be with the same company, or with two companies. We can work either way.

The two accounts we may ask about

If someone else built or manages your site, they may control one or both accounts. That is normal - we will help sort out who has access.

DOMAIN NAME ACCOUNT

This is where your website address lives, like yourbusiness.com. DNS settings usually live here too. GoDaddy is a very common example.

Think: where the name is registered and renewed.

HOSTING ACCOUNT

This is where the website files live and run. It may be with the same company as your domain, or with a different hosting company.

Think: where the website is stored.

Choose your setup.

OPTION 01

Keep your hosting

YOU MAY NEED TO

Invite us to the website and hosting account. If launch changes are needed, we may also need the domain account.

WE HANDLE

Check what your current host allows, make the agreed updates, and guide launch.

Keep current services active until we confirm what is safe to cancel.

OPTION 02

Use Wallace Shift hosting

YOU MAY NEED TO

Approve the hosting plan and share current site access. For launch, we usually need the domain account or your approval there.

WE HANDLE

Set up hosting, move or rebuild the site as needed, test it, and guide the switch.

Website Care: hosting, monitoring, backups, updates, and support. Larger new work is quoted separately.

What not to change yet

Do not cancel old hosting, email, or domain services yet. Email may be tied to the old account, and some website builders cannot move as-is. We check first, then tell you what can safely be cancelled.

To get started

Send your website address, plus any company names or logins you know: GoDaddy, Wix, Squarespace, WordPress, your web person, IT person, or current web services provider. Do not buy, move, or cancel anything first.
